

Cheat Sheet

Key tips to get you started	Start a new project with your data	<ol style="list-style-type: none"> 1. File ► Data Sets ► Add to Project ► From File 2. Select Automatically detect data file structure 3. (Optional) Choose from among Advanced options
	Modify the table	In the Outputs tab choose the questions you want to show in the blue and brown question menus 
	Duplicate the table	Push the Duplicate table button in between the blue and brown drop down menus to make new tables 
	Manipulate the table	<ul style="list-style-type: none"> • Drag-drop categories and columns to move them and merge them • Right-click to bring up menu of options (dependant on where you click) • Highlight multiple categories with Shift or Ctrl, and then right-click
What to do when you cannot figure out how to use Q	Right-click on whatever it is you are trying to change	
	Type into Search	
	Get help interpreting a table	Help ► Interpret This Table
	Read the wiki	Help ► Q Wiki (Online Reference Manual)
	Do some training modules	Help ► Online Training
	Contact support	support@q-researchsoftware.com
Data files and file management	Start a new project	<ol style="list-style-type: none"> 1. File ► Data Sets ► Add to Project ► From File 2. Select Automatically detect data file structure 3. (Optional) Choose from among Advanced options
	Starting using a QPack	<ol style="list-style-type: none"> 1. Double-click on the QPack or File ► Open ► Existing Project 2. File ► Save 3. Read any messages carefully (as you may destroy work)
	Opening a project	File ► Open ► Existing Project or Recent Projects
	Share projects	File ► Share This sends the project and data files (as a Q Pack)
	Update the data in a project	File ► Data Sets ► Update
	Merge different projects	Open two copies of Q and drag and drop tables and variables from one project to another
	Merge data files	Tools ► Merge Data Files
	Stack data	Tools ► Stack SPSS Data File
	Panel data (e.g., occasion-based data)	<ol style="list-style-type: none"> 1. Stack the data (if necessary) 2. File ► Data Sets ► Add to Project ► From File 3. File ► Data Sets ► Edit Relationships
	When you analyze data in Q you are always using two files:	
<ul style="list-style-type: none"> • Project file (.Q): this contains all the work you have done in Q. • Data file (e.g., .sav): this contains your survey data; Q does not change the raw data. • A Q Pack (.QPack) is an archive of your Project and your Data 		

What to do when the data looks wrong	Contact the person that set up the project (if you did not do it yourself)	
	Check the base	base n = 0; total n = 13; 13 missing; 88% filtered out;
	Check n and base n	Statistics – Cells ▶ n or Base n
	Check statistical testing	Edit ▶ Project/Table Options ▶ Statistical Assumptions Show significance: Compare columns
	Check that the Question Type setting makes sense on the Variables and Questions tab	Either go to the Variables and Questions tab and find the data, or, press  to the right of the relevant dropdown menu
	Check that the Filter is correct	E.g., Filter: Q8. One or more message not recalled
	Check that the Weight is appropriate	E.g., Weight: None
	Check that the correct rules are applied and, try and remove the rules	If a Rule has been applied, a pink Rules tab will appear at the bottom of the table. Control when applied using the Apply dropdowns 
	Hide or unhide variables	On the Variables and Questions tab, press H
	Check if empty rows/columns are hidden	Check to see if  is depressed (this hides empty rows and columns)
	Review the Value Attributes	Right-click on a row or column heading and select Values
Review how a variable has been constructed	Go to the Variables and Questions tab Find the variable Right-click: Edit Variable	
Contact support	File ▶ Share ▶ Send to Support (encrypted) & indicate which table and which cells in the table look wrong and why	

Tables and plots Note that the one of the main ways of modifying a table is to change the data in the table, and when this is done all other tables using the same data will also change (see Manipulating Data)	View additional statistics	Right-click: Statistics – Cells/Right/Below ▶
	Duplicate a table	Push the Duplicate table button in between the blue and brown <i>drop down</i> menus to make new tables 
	Changing the data	Choose the questions you want to show in the blue and brown question menus  
	Create plots in Q	Select from Show Data As (top middle of the screen)
	Customizing the look and feel of tables	Edit ▶ Project Options ▶ Customize and Table Styles
	Lock the dropdowns used to select data on a table	Right-click on table(s) in the Report and select Lock
	Create folders	Right-click on a table in the Report and Add group
	Create lots of tables	Create ▶ Tables ▶ Banner Tables (this also automatically creates banners & flattens data – see Manipulating Data)
	Simultaneously change lots of tables/plots	Select them all at the same time and then modify as normal (e.g., apply filters, right-click and Statistics – Cells)

Weights and filters Weights and filters can be applied to the entire project or to selected tables and plots.	Applying filters and weights	In the Outputs tab highlight a table/chart in the report tree and then select from the Filter or Weight menus. If applied, the filter/weight will be indicated in green. Filter:  AND  Weight: 
	Creating a weight	Create ▶ Variables and Questions ▶ Variable(s) ▶ Weight
	Allowing variables to be selectable as weights and filters	In the Variables and Questions tab, press F W
	Creating simple filters	Automate ▶ Browse Online Library ▶ Filtering ▶ Create Filters from Selected Data
	Creating filters from a table	Create a table, select the relevant cells and press 
Creating complicated filters (eg: filters involving more than 2 variables, with OR, NOT and AND statements)	Create ▶ Variables and Questions ▶ Variable(s) ▶ Binary – Complicated Filter	

Visualizations	Convert a table into a plot	1. Select a Table . 2. Choose an option from the Show Data As menu. 
----------------	-----------------------------	---

	Interactive and Advanced Visualizations	<ol style="list-style-type: none"> 1. Create ► Charts ► Visualizations ► ...  2. Select the new R object in the Report Tree. 3. On the right hand-side in the Object Inspector, link it to a table or variables  4. Click Calculate (hint: you can set Calculate to 'automatic' so it automatically updates if you change the input table/variables)
Viewing raw data	Seeing the raw data for a question	In the Outputs tab Brown dropdown menu: RAW DATA
	Seeing raw data for lots of variables in Excel	<ol style="list-style-type: none"> 1. Select the variables in the Variables and Questions tab 2. Right-click: Export variables to Excel 3. In Excel: VIEW ► Freeze Panes ► Freeze Top Row 4. In Excel: DATA ► Filter
	Seeing all the raw data in Q	All the raw data is viewable on the Data tab. You can sort columns, show filters and re-order the columns (this is done on the Variable and Questions tab)
Exporting Any chart templates that you create in Excel, PowerPoint and Word, are available in the Format dropdown that appears when exporting. See also Viewing raw data .	Export to PDF	File ► Export ► To PDF
	Export to Excel, PowerPoint and Word	
	Automatically update Office exports	Ensure the Office document is open and export the relevant tables/charts again. If Q can detect them as being already exported to the document, it will give you the option to Update. See the Q wiki for more details on automatic updating.
	Setting default chart types for Office	<ol style="list-style-type: none"> 1. Create Chart Templates using Excel, Word or PowerPoint 2. Edit ► User Options ► Export Chart Defaults
Manipulating data There are lots of tools for manipulating data. These are only some of the more commonly-used basic tools.	Merging	In the Outputs tab: Drag and drop, or, right-click: Merge
	Creating NETs	In the Outputs tab: Right-click: Create NET
	Sorting/Re-ordering categories	In the Outputs tab: <ul style="list-style-type: none"> • Drag and drop • Right-click: Sort By • See Using Rules on how to automate the sorting of categories on a table
	Removing a category and rebasing	In the Outputs tab: <ul style="list-style-type: none"> • Right-click: Remove (only for mutually exclusive options) • Filtering: Create a NET and right-click on it: Create filter
	Removing a category without rebasing	In the Outputs tab: Right-click: Hide
	Switch between % and averages as main statistics on a table	In the Outputs tab: <ol style="list-style-type: none"> 1. Right-click on the row or column headers on the table 2. Select the question (its name will appear near the bottom of the menu) 3. Select Restructure data and the appropriate option
	Creating a 2 nd version of a question	In the Outputs tab: Right-click on table row/column heading: Duplicate Question
	Banding numeric variables	<ol style="list-style-type: none"> 1. See Creating a 2nd version of a question above 2. See Switch between % and averages as main statistics on a table above 3. Merge the rows together according to the desired bands – See Merging above
	Recoding (changing Value Attributes)	In the Outputs tab: Right-click on table row/column heading, select Values and change the numbers in the Value column
	Create a banner	In the Outputs tab: <ol style="list-style-type: none"> 1. Create a new table 2. Create ► Banner ► Drag and Drop
	Create a new variable	<ul style="list-style-type: none"> • Variables & Questions tab: Create ► Variables and Questions ► Variable(s) ► JavaScript Formula ► Numeric • Search the Q Wiki for "JavaScript variables" to see examples of basic code
	Recoding into a different variable	In the Variables & Questions tab: <ol style="list-style-type: none"> 1. Right-click: Copy and Paste Variable(s) ► Exact copy 2. Modify the variable as per your needs
Standard mathematical functions	In the Variables & Questions tab: Insert Ready-Made Formula(s) ► Mathematical Functions (by Case)	
Creating a binary variable	Follow the steps for creating filters in Weights and Filters	
Automation in Q Q brings efficiencies to your quantitative workflow in many ways.	Using Rules 	<ul style="list-style-type: none"> • Example: Automate ► Online Library ► Sorting and Reordering ► Sort Rows (Automatically Updates when Data Changes) • If a Rule has been applied, a pink Rules tab will appear at the bottom of the table 
	Using QScripts 	Example: Automate ► Online Library ► Create New Variables ► Create Top 2 Category Variables

For more information, search the Q wiki and blogs for 'Automatic'.

Updating your analysis	File ► Data Sets ► Update (and replace the datafile)
Automatic Updating of PowerPoint	See: Exporting
Automatic Updating of R	<ul style="list-style-type: none">• R objects in the Report Tree will turn grey if out of date (if the source changes)• If you want the output to update automatically, tick the Automatic box• If you want to run your calculation manually, leave the box un-ticked

Doing Calculations in R You can use R to do custom calculations, and many options below also use R. 	Prepare the data	Question Type and Variable Type determine how variables will be used in R calculations: <ul style="list-style-type: none"> • For Numeric variables, choose Number, Number – Multi, or Pick Any • For Factors, choose Pick One or Pick One – Multi • For Ordered Factors, also change the Variable Type to Ordered Categorical
	Custom Calculations	Create ► R Output Refer to variables and tables by name to use them in your calculation: <ul style="list-style-type: none"> • For variables, check the Name column in the Variables & Questions tab • For tables, right-click in the Report and select Reference name
	Standard R	Items in the Create menu marked with  use R to run the analysis
	Automatic Updating	<ul style="list-style-type: none"> • If you want the output to update automatically when the data changes, tick the Automatic box • If you want to run your calculation manually, leave the box un-ticked

Advanced Analyses All are found under the Create menu. Many advanced analyses use R and show the  symbol. Some advanced analyses do not use R.	The advanced analyses that use 	<ul style="list-style-type: none"> • Link the analysis up to source data (table, variables), as per the steps in in Interactive and Advanced Visualizations • In the Object Inspector on the right, you can view and edit the R Code. Go to Properties > R Code
--	--	--

Further documentation, videos and worked examples are available on the wiki at wiki.q-researchsoftware.com as well as the Displayr Blog at www.displayr.com/blog

Question Types

The way that Q presents data is determined by the underlying **Question Type** of the data. Question types are set automatically when importing data and can be modified in the **Variables and Questions** tab.

Question Type	Description	Example																
 Text	Each observation in the data file contains text.	What is your name? _____																
 Text – Multi	Multiple related fields of text for each observation in the data file.	Please type in the names of your three favorite soft drinks 1.____ 2. ____ 3.____																
 Pick One	A set of mutually exclusive and exhaustive categories (i.e., nominal or ordinal scales).	Are you... <input type="radio"/> Male <input type="radio"/> Female																
 Pick One – Multi	A series of Pick One questions sharing the same scale points.	Please rate your satisfaction with the following airlines: <table border="0" style="width: 100%; text-align: center;"> <tr> <td></td> <td>Low</td> <td>Med</td> <td>High</td> </tr> <tr> <td>United</td> <td><input type="checkbox"/></td> <td><input type="checkbox"/></td> <td><input type="checkbox"/></td> </tr> <tr> <td>British Airways</td> <td><input type="checkbox"/></td> <td><input type="checkbox"/></td> <td><input type="checkbox"/></td> </tr> <tr> <td>Qantas</td> <td><input type="checkbox"/></td> <td><input type="checkbox"/></td> <td><input type="checkbox"/></td> </tr> </table>		Low	Med	High	United	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	British Airways	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Qantas	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	Low	Med	High															
United	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>															
British Airways	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>															
Qantas	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>															
 Number	A numeric variable (i.e., interval or ratio scale).	How many glasses of wine did you drink last night? ____ glasses																
 Number – Multi	A series of numeric variables measured on the same scale.	Next to the brands below, please indicate how many times you have purchased them in the past week Coke ____ Pepsi ____ Fanta ____																
 Pick Any	What is usually referred to in market research as a multiple response or multi question. Respondents are asked to pick all that apply from a list of options.	Which of the following have you bought in the past week? <input type="checkbox"/> Coke <input type="checkbox"/> Pepsi <input type="checkbox"/> Fanta																
 Pick Any – Compact	Same as Pick Any but stored in a more compact format (see the Q Reference Manual).	Same as Pick Any but stored in a more compact format (see the Q Reference Manual).																
 Pick Any – Grid	A set of binary variables that can be thought of as being ordered in two dimensions (e.g., a Pick Any question asked in a loop).	Which of these brands are cool? <input type="checkbox"/> Coke <input type="checkbox"/> Pepsi <input type="checkbox"/> Fanta Which of these brands are young? <input type="checkbox"/> Coke <input type="checkbox"/> Pepsi <input type="checkbox"/> Fanta Which of these brands are sexy? <input type="checkbox"/> Coke <input type="checkbox"/> Pepsi <input type="checkbox"/> Fanta																
 Number – Grid	A question requiring numeric responses, where the variables can be thought of as being ordered in two dimensions (e.g., a Number – Multi question asked in a loop).	In the past month, how many economy flights did you take on... Qantas ____ United ____ Delta ____ ...and how many business class flights did you take on... Qantas ____ United ____ Delta ____																
 Date	A question containing a date.	What is your date of birth? ____ / ____ / 19____																
 Ranking	Multiple numeric variables that represent a ranking, where the highest number is most preferred and ties are permitted.	Rank the following brands according to how much you like them... Coke ____ Pepsi ____ Fanta ____																
 Experiment	A Number , Number – Multi , Ranking , Pick One or Pick One – Multi question, where the alternatives presented were varied using an experimental design.	Which of these would you buy? <table border="1" style="width: 100%; text-align: center;"> <tr> <td>Coke</td> <td>Pepsi</td> <td>Fanta</td> </tr> <tr> <td>\$2.00</td> <td>\$4.20</td> <td>\$3.20</td> </tr> <tr> <td>Can</td> <td>Bottle</td> <td>Flask</td> </tr> </table>	Coke	Pepsi	Fanta	\$2.00	\$4.20	\$3.20	Can	Bottle	Flask							
Coke	Pepsi	Fanta																
\$2.00	\$4.20	\$3.20																
Can	Bottle	Flask
